

PRISON GUARD

Control System

Advanced system designed for controlling and monitoring subsystems installed on the object. Elastic configuration, unlimited development capabilities and possibility of connection with other systems, make that this product is able to cope with every assignment.

Main features of Control System:

Graphic visualization of system status marked on any map (f.eg. building plan).

Cooperation with touchscreens.

Elastic configuration through script language.

Possibility of defining many users with different access rights.

Unlimited capabilities of development.

Full events logging.
